

WHITEPAPER
MUSTANGTOKEN

EXCLUSION OF LIABILITY

We are not a financial product! Only invest what you can lose! Invest at your own risk!

WHAT IS MUSTANGTOKEN?

A new token has entered the wild west of the cryptoworld. For weeks our team has been working to create the best possible token that will be more than just a new meme token.

Mustangtoken reflects the independent and tenacious character of the Majestic Creature. In addition to the committed marketing team, the strong and fast growing community, as well as the sophisticated source code and the burning strategy, the developers already have a charity partnership with Liberty Home.

(<https://www.libertyshome.org/>) They are committed to ensuring that retired racehorses are retrained as free time riding for children.

Why is the mustang our leading figure?

The term Mustang probably goes back to the Spanish term Mestengo (stranger or vagabond). Still Mustangtoken is probably still a stranger token in the wild west of the crypto world.

TECHNICAL DETAILS

- Mustangtoken is a **BEP20 token** with a max total supply of **1 quadrillion**.
- Through each transaction, **5%** goes to the **liquidity pool** and another **5%** to **all holders**.
- In addition, Mustangtoken already has a liquidity of **10,000 dollars** from day 1, which is also **locked** in order to generate a transparent security for the investors.
- Mustangtoken`s contract is already **verified** and ready for review on the **Binance Smart Chain**.
- This horse is a real Nerd: Mustangtoken has developed a source code. For this, we spent months analyzing the best codes on the smartchain, picking out the best of each and improving them even further.
- This, we can guarantee that Mustangtoken has one of the **best source codes** on the current Binance smart chain market from our technical point of view, which stands out due to its diversity.

THIS HORSE IS SETTLED WITH AN AUTOMATIC LP

With the **Automatic LP** on the hooves we have a **double advantage** for our **owners**. On the one hand to the Automatic LP in our contract firmly anchored of buyers and sellers with each transaction an equal percentage which flows into the **Liquidity**.

Thus we can permanently guarantee a **solid price floor**. The holders are rewarded by increasing the volume of their tokens with each sale. Therefore our holders can be happy every time a whale decides to sell, because the holders **increase their cushion of mustangtokens**. The classical staking is outdated from our point of view. We rely on **modern technology** that will replace outdated reflection tokens. This is the **new token generation**.

This is our time to shine!

Original Supply: 1 000 000 000 000 000 Token
Initial Burn: 300 000 000 000 000 Token
Event Burn: 80 000 000 000 000 Token

Presale Price: 1bnb / 1 000 000 000 000
Pancake Price: 1bnb / 750 000 000 000

MANUAL BURNS

Why did we decide to do manual burns?

We have decided that in addition to the big burn at the very beginning of the project, we will add more manual burns.

The community will have the chance to be rewarded for reaching goals through our manual burns.

This can be achieved for example by reaching a certain number of holders or a number of upvotes in Reddit forums or Twitter posts.

www.mustangtoken.net

t.me/mustangtoken

[mustangtoken](https://twitter.com/mustangtoken)

SUPPLY VS. PRICE

It is self-explanatory that through these **additional manual burns** the value of the token increases over the course of the project. **It is up to you** how valuable Mustangtoken will become. Thus, we offer our community more opportunities to positively influence the price instead of simply hodlin and look at the chart.

6 STEPS THAT EXPLAIN WHY THIS WILL BE A SAFE RIDE

1

Transparency. We show exactly how the distribution of our tokens is.

2

Our Liquidity is locked for 6 months in DxSale but could be extended even more.

3

Our cooperation with Liberty Home is already confirmed. So it is clear that we have a real partnership.

4

300 000 000 000 000 tokens are burned by the dev`s directly to the launch.

5

LP will be increased with each transaction and locked to Pancake.

6

Through regular AMA`s on Discord and Twitch we will permanently inform you about the current status and you can ask us all questions about the project. So get on your horse, this is gonna be a looong looong ride!

TRANSPARENCY

It is very important to us to be as **transparent** as possible to our community.

In the course of this we have decided to provide the exact distribution of the coins in an overview:

260 000 000 000 000 - approx **26%** Deployer (Developing, Marketing, Organisation, Legal, Charity)

210 000 000 000 000 - approx **21%** PancakeSwap

150 000 000 000 000 - approx **15%** Presale

=

620 000 000 000 000 - approx **62%** Circulating Supply

380 000 000 000 000 - approx **38%** Total left to burn

-300 000 000 000 000 - approx **30%** of which burned right at the beginning

=

80 000 000 000 000 - approx **8%** the rest is burned by events

The numbers and distribution may vary in the course of the project.

WHERE SHOULD THE RIDE GO?

A LOOK IN THE FUTURE:

This horse has a **huge marketing team**, and a big loyal community. However, Mustangtoken will also save many horses from death. Through our partnership with Liberty home, we will help retrain old racehorses to be used as recreational horses for children.

This and many more points from our roadmap will show you the way you will ride with us.

ROADMAP

MUSTANGTOKEN

QUARTER 1

We have started planning the Mustangtoken. To this end, we have put together a **strong team** of individual personalities, developed the concept, written the source code and prepared ourselves for our social media presence as well as looking for partners and collaborations.

QUARTER 2

Official launch of the Mustangtoken, we have also contacted **Coingecko, Coinstats and Coinmarketcap** to be listed in the near future. In addition, we have started a **large marketing campaign** to build up a large community before the start. We have secured the brand name and this formed the basis for the legal foundation that we need for later audits.

QUARTER 3

We will start with integrating the Mustang token into different exchanges. The first target here will be **Whitebit**. In addition, work begins on the **Mustangtoken NFTs** as well as the development of a **Mustangtoken wallet, Mustangtoken app** and the official sale of our **merchandise**.

QUARTER 4

Our **NFT's, wallet and app** will be released. We will also be listed on **other exchanges**.

SO WHY THE HELL MUSTANG?

The Mustang is a horse that was originally introduced to the New World by the **Spanish Conquistadors**. Mostly these were horse breeds like Arabian and Barbary. Many of these horses escaped from captivity and spread over almost the entire continent in a very short time. They ran wild and established themselves as a stable **new population**.

- We foresee the same for our Mustangtoken. It will be a fast wild ride upwards and in the end our Mustang token will **establish itself** as a fixed address in the, for many still "new" crypto world. The Mustang itself is a **robust, tough horse with a stubborn and independent character**.

- This is how we see ourselves and our community: we as a team will work tenaciously and tenaciously on our project and for our supporters. In doing so, we will tread our path just as independently of other cryptocurrencies and always **incorporate innovative, our own, crazy and wild ideas into the project**.

The community and Hodler should brace themselves. It's going to be a **wild ride**, it's not always going to be all up. But if you hold on to the vision unwaveringly together with us, as we do, as our **leading figure** does, there will only be one direction in the long run, and nothing will stand in the way of the Mustangtoken becoming firmly established.

The settlement of the new world was certainly strongly influenced by the Mustang to this extent or made possible at all.

- What do we understand as our task as Mustang in the crypto world? And how should this new world look like?

What is especially important to us, what is close to our hearts, is to make everything better in "**building the new world**". To introduce already now a **trend-setting way!**

Investors from the share world might know: Already today it is hardly possible for large institutional investors and funds to come around securities in the green range. The **clientele, political and social pressure** is growing enormously to include green projects in their investment strategy.

In the crypto world, this pressure is not yet as prevalent as in equities. But surely you have also heard about one of the biggest problems of Bitcoin. The enormous demand for energy.

Bitcoin is now moving more and more into the spotlight also for institutional investors and funds. Thus, also on the Bitcoin and generally the pressure on the crypto world will feel a greater and greater pressure to sustainability.

This is where we would like to move forward. This is the "new world" we would like to settle with our leading figure, the Mustang.

Already prepared for the future, for a growing public interest and an increasing demand for sustainability, we would like to be at the forefront of the crypto world with our Mustangtoken as a prime example.

Now one or the other might think: "Well, environmental protection, animal welfare....that doesn't interest me. I just want to make my money fast."

Please consider an investor's wisdom that says you should never go against a trend. As much as you may not think anything of this, open your eyes, environmental protection & sustainability is a worldwide unstoppable ever growing "trend". it is a **MUST(ang)**. **So jump on and profit from this trend!** ... And make at the end even you something good for our world

OUR PARTNERSHIPS

LIBERTY'S HOME

One day in the life of every racehorse comes his **last race**. For the best stallions and mares, life as a stud or broodmare awaits them. But what happens to the masses that do not make it to a carefree life? Every year, thousands of **retired racehorses are slaughtered for human consumption**. When a horse can't command a high price from a breeder and an owner wants to unload them quickly for cash, slaughterhouses provide the option – often under the guise of “euthanasia”.

Libertys Home's mission is to **give retired racehorses the opportunity** to be retrained as **recreational horses for children and adults**. Racehorse vs Recreational Horse. Two worlds collide. In many leisure stables, former racehorses are not welcome guests. They are considered crazy, dangerous, not suitable for herds and difficult to handle. So when a racehorse has to end its career for various reasons, **Libertys Home makes its life as nice as possible** by professionally retraining it for normal leisure life before selling it. Thus, many people and children can still have fun with their horse and may have saved a life. (<https://www.libertyshome.org/>)
